

TURN YOUR PANASONIC AG-AF101 or AG-AF100 INTO A REAL PL-MOUNT DIGITAL CINEMA CAMCORDER

The new WESPGEAR SX-AF100 Shoulder mount completely transforms your Panasonic from a prosumer large sensor camera into a digital cinema camera that adheres to all industry standards :

- The PL-mount is fixed to the chassis, so lenses of higher weight (e.g. Schneider Cine-Xenar lenses) can be mounted without any problem
- The shoulder mount is equipped with a V-wedge system that is compatible with standard tripod adapter plates (VCT-14, SHAN-T700, KA-550)
- The shoulder mount is equipped with a V-mount battery adapter plate and incorporates a virtually lossless adapter to 7.3V for powering the camcorder with the V-mount battery. An extra D-tap output is also available
- Industry standard 15mm rod connections are incorporated, so any handles, matteboxes or other accessories that slot to 15mm rods can be used
- The construction is of durable aluminium, giving the unit a nicely balanced feel and proper weight for stable off-shoulder shots
